

PEHMOHEIJASTIMET

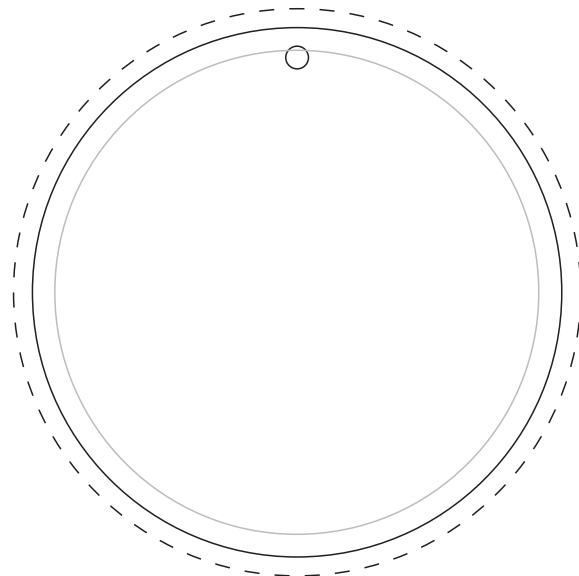

Löydät tästä tiedostosta eri pehmoheijastimille käytössä olevat yleiset muottien koot ja muodot. Myös oma muotti on mahdollista teettää omalle muodolle. Musta yhtenäinen viiva on heijastimen ulkomuoto, katkoviiva esittää aineiston kokoa ja harmaa sisempi viiva vinyylin saumauksesta syntyvää aluetta. Älä aseta tärkeitä elementtejä harmaan alueen ulkopuolelle. **Pyri käyttämään voimakkaita kontrasteja. Tumma tausta ja tumma kuvitus ei näy heijastinkalvon läpi.**
